For more information, read the "Read the Manual!" section of the Box2D documentation. OpenGL ES If you have a NVIDIA Tegra or PowerVR GPU in your device, you can use a 3D graphics library called OpenGL ES. The included pixi.js is written with OpenGL ES in mind, but if you are using an old device without such a GPU, you can still use pixi.js with a regular web browser. Javascript Web MIDI API If you want to see what the effect of some code is on a midi-enabled device, use the Javascript Web MIDI API. In fact, you will be able to test the effect of a patch on many platforms at once if you use it! "Web MIDI" is a standard that allows native code to communicate with Javascript code, and vice-versa. It does this via "devices", which are references to objects that work with MIDI, and "ports" which are references to objects that can send and receive data. For more information about the Web MIDI API, please read the "Read the Manual!" section of the Web MIDI API documentation. WebGL WebGL is a standard for the creation of 3D graphics on the web. The implementation is currently lacking on Android, but we're working on it! In the meantime, you'll want to use a native web browser like Chrome or Firefox, as the iPad/iPhone/iPod Touch lacks this functionality. Node.js With Node.js, you can write Javascript code on the server. On the client side, you can use a library called Mocha to write Javascript tests for your Node.js code. There are also a number of libraries that offer framework-like functionality, such as Express and Sequelize. However, there are a number of Node.js modules that are also helpful for working with the client, such as Socket.IO, which provides WebSockets support, and Pusher, which provides a powerful and flexible pub/sub system. For more information about Node.js, check out the "Read the Manual!" section of the Node.js documentation. "WebSockets" are a standard for real-time communication between a server and a client. They were created by Google and are currently supported by Chrome, Safari, Firefox, Opera, and Microsoft Edge 82157476af
